Prescription Opioids

Purdue developed extended-release formulations containing opioid agonists such as oxycodone, morphine, buprenorphine, and hydrocodone. For many years, **Purdue has been an industry leader in the fight against opioid abuse and diversion.**

IMPORTANT SAFETY INFORMATION

WARNING: ADDICTION, ABUSE and MISUSE; RISK EVALUATION AND MITIGATION STRATEGY (REMS); LIFE-THREATENING RESPIRATORY DEPRESSION; ACCIDENTAL EXPOSURE; NEONATAL OPIOID WITHDRAWAL SYNDROME; and RISKS FROM CONCOMITANT USE WITH BENZODIAZEPINES OR OTHER CNS DEPRESSANTS

Addiction, Abuse, and Misuse

BUTRANS[®] exposes patients and other users to the risks of opioid addiction, abuse, and misuse, which can lead to overdose and death.

Assess each patient's risk prior to prescribing BUTRANS, and monitor all patients regularly for the development of these behaviors and conditions [see *Warnings and Precautions (5.1)* and *Overdosage (10)*].

especially in children,

and

Neonatal Opioid Withdrawal Syndrome

Prolonged use of BUTRANS during pregnancy can result in neonatal opioid withdrawal syndrome, which may be life-threatening if not recognized and treated, and requires management according to protocols developed by neonatology experts. If opioid use is required for a prolonged period in a pregnant woman, advise the patient of the risk of neonatal opioid withdrawal syndrome and ensure that appropriate treatment will be available [see *Warnings and Precautions* (5.4)].

Risks From Concomitant Use With Benzodiazepines Or Other CNS

Depressants

Concomitant use of opioids with benzodiazepines or other central nervous system (CNS) depressants, including alcohol, may result in profound sedation, respiratory depression, coma, and death [see *Warnings and Precautions* (5.5), *Drug Interactions* (7)].

- Limit dosages and durations to the minimum required.
- Follow patients for signs and symptoms of respiratory depression and sedation
